Abstract

The MagellanPlus Workshop Series Programme is co-funded by ECORD and ICDP and designed to support scientists in developing new and innovative science proposals to meet future challenges in Earth, life and environmental sciences. For this purpose the MagellanPlus Workshop Series Programme funds workshops and/or scientists that are expected to lead to or foster high-quality and innovative scientific drilling proposals for submission to IODP and ICDP.

The programme this year has one “standard” call, one directed at initiating concepts for a future scientific ocean drilling programme to be developed beyond 2023, and one directed at Demystifying the IODP Proposal Process for Early-Career Scientists.

The “standard” call is directed at proposals that follow from the major themes of the IODP and ICDP science plans: Earth’s Surface Environmental Change, Processes and Effects; Solid Earth Cycles & Geodynamics; The Deep Biosphere & Sub-Seafloor Ocean (particularly welcome!);

The deadline is on 15 January.

Proposals should include complete and realistic scripts for the proposed workshop. A funded workshop must be executed within 12 months after notification of funding. A typical workshop is expected to take place over 2-4 days, and have 20-35 participants. The contribution will not exceed 15,000€ per workshop. The participation of young scientists is particularly encouraged.
